In set theory and mathematical logic, the Lévy hierarchy, introduced by Azriel Lévy in 1965, is a hierarchy of formulas in the formal language of the Zermelo-Fraenkel set theory, which is typically called just the language of set theory. This is analogous to the arithmetical hierarchy which provides the classifications but for sentences of the language of arithmetic.

The Reflection Principle encapsulates the essence of ZF set theory, for as shown by Levy (1960), the axioms of Extensionality, Separation, and Foundation, together with the Reflection Principle, formulated as the axiom schema asserting that each formula is reflected by some set that contains all elements and all subsets of its elements (note that the  $(V_\alpha)$  are like this), is equivalent to ZF.

### Set Theory (Stanford Encyclopedia of Philosophy)

Because the fundamentals of Set Theory are known to all mathematicians, basic problems in the subject seem elementary. Here are three simple statements about sets and functions. They look like they could appear on a homework assignment in an undergraduate course. 1. For any two sets X and Y, either there is a one-to-one function from

### AN INTRODUCTION TO SET THEORY

The problem actually arose with the birth of set theory; indeed, in many respects it stimulated the birth of set theory. In 1874 Cantor had shown that there is a one-to-one correspondence between the natural numbers and the algebraic numbers.

1. The Basic Language of Set Theory. In the present section and in Sections 3 and 4 we shall thoroughly discuss the language we are going to use for set theory. Usually when one studies a branch of mathematics one is not concerned much with the question as to which exactly is the language used in that branch.
