controller) is an electronic device that connects a computer to a computer network, usually a LAN. It is considered a piece of computer hardware. Most modern computers support an internal network interface controller embedded in the motherboard directly rather than provided as an external component.

A code with this ability to reconstruct the original message in the presence of errors is known as an error-correcting code. This triple repetition code is a Hamming code with $m = 2$, since there are two parity bits, and $2^2 - 2 - 1 = 1$ data bit. Such codes cannot correctly repair all errors, however.
